It provides a comprehensive set of symbols and rules for depicting different types of welds, weld sizes, weld lengths, and additional instructions, facilitating effective communication across the manufacturing process.

Understanding the Components of BS EN 22553 Weld Symbols

Weld symbols under BS EN 22553 are composed of various elements that convey specific information about the welds. Familiarity with these components is key to interpreting and applying the symbols correctly.

Basic Elements of a Weld Symbol

The main components include:

- Welding symbol (arrow and reference line)
- Basic weld symbol (shapes indicating weld type)
- Supplementary symbols (indications for weld size, length, contour, and finish)

- Tail (optional, used for additional instructions or standards references)

The Welding Symbol and Reference Line

- The reference line is a horizontal line representing the weld to be made.
- An arrow points from the reference line to the joint where the weld is required.
- The position of the weld symbol in relation to the reference line indicates whether the weld is to be made on the arrow side or the other side of the joint.

Arrow Side and Non-Arrow Side

- The arrow side (or "side A") is where the arrow points.
- The other side (or "side B") is opposite the arrow.
- Symbols placed below the reference line indicate welds on the arrow side; symbols above indicate welds on the non-arrow side.

Types of Weld Symbols as per BS EN 22553

The standard defines various basic weld types, each represented by specific graphical symbols.

Common Basic Weld Symbols

- Fillet Weld: A triangular symbol indicating a weld that joins two surfaces at a right angle.
- Groove Weld: Symbols representing different groove weld types such as V-groove, bevel, U-groove, and square groove.
- Edge Weld: For welding along the edge of a plate or section.
- Spot and Plug Welds: Represented by circles or other specific symbols.
